

An Overview of the Financial System

Chapter 2

Econ 351 – Monetary Economics

University of Tennessee, Knoxville

August 24, 2026

Preview

- ▶ This chapter provides an *overview* of **financial markets** and **institutions**
- ▶ How funds flow from savers to borrowers, what instruments are traded, and why the system is regulated

Funds move from savers to borrowers through two channels: **financial markets** (direct finance) and **financial intermediaries** (indirect finance).

Outline

Direct and indirect finance

Structure of financial markets

Financial market instruments

International financial markets

Functions of financial intermediaries

Types of financial intermediaries

Regulation of the financial system

What Is Finance?

Two Channels of Fund Flows

▶ **Direct Finance**

- ▶ Funds flow through **financial markets**
- ▶ Savers lend directly via bonds, stocks, etc.

▶ **Indirect Finance**

- ▶ Funds flow through **financial institutions**
- ▶ Intermediaries collect deposits and make loans

Key Question

Who bears the risk?

Flows of Funds Through the Financial System

Direct finance occurs through financial markets; indirect finance occurs through financial intermediaries.

Source: Mishkin, The Economics of Money, Banking, and Financial Markets

Functions of Financial Markets

Mobilizing Funds

- ▶ The most basic and important function
- ▶ Financing business investment

Intertemporal Consumption

- ▶ Allows households to shift consumption across time
- ▶ Example: mortgage lending

Risk Management

- ▶ Risk transfer
- ▶ Derivatives and asset securitization

Outline

Direct and indirect finance

Structure of financial markets

Financial market instruments

International financial markets

Functions of financial intermediaries

Types of financial intermediaries

Regulation of the financial system

Debt vs. Equity Markets

Market Types

- ▶ Debt markets: bonds, loans (creditor claims)
- ▶ Equity markets: stocks (ownership claims)

Debt Instruments

- ▶ Fixed payments (interest + principal)
- ▶ Maturity: short / intermediate / long
- ▶ No ownership

Equity Instruments

- ▶ Ownership in firm (residual claimants)
- ▶ Dividends & voting rights

Market Size

- ▶ Debt markets are larger than equity markets (market value)

Debt and Equity: A Spectrum

Pure Debt

- ▶ Fixed payments
- ▶ Low risk

Pure Equity

- ▶ Profit-based return
- ▶ High risk

In Between

Preferred stock Convertible bonds Performance-based contracts

Debt holders are paid first and get a fixed amount; equity holders are **residual claimants** – they get whatever is left, which is why equity is riskier.

Primary and Secondary Markets

Primary Market

- ▶ New securities sold to initial buyers
- ▶ Often private transactions
- ▶ Investment banks underwrite securities and guarantee prices

Secondary Market

- ▶ Previously issued securities
- ▶ Examples: NYSE, NASDAQ, bond markets
- ▶ Brokers match buyers and sellers; dealers trade directly

The New York Stock Exchange on Wall Street – the best-known secondary market.

Wikimedia Commons, Arild Vågen, CC BY-SA 4.0

Why Are Secondary Markets Important?

Provide Liquidity

- ▶ Investors can easily buy and sell securities (e.g., CDs)
- ▶ Increases the attractiveness of securities

Price Discovery

- ▶ Secondary market prices help determine primary market prices

Improve Market Efficiency

- ▶ More accurate valuation of financial instruments
- ▶ Reduces price dispersion across markets

Money vs. Capital Markets

Money Market

- ▶ Short-term debt instruments
- ▶ Maturity: ≤ 1 year
- ▶ High liquidity
- ▶ Low risk
- ▶ Examples: T-bills, commercial paper, CDs

Capital Market

- ▶ Long-term debt and equity instruments
- ▶ Maturity: > 1 year
- ▶ Lower liquidity
- ▶ Higher risk
- ▶ Examples: stocks, long-term bonds

The dividing line is **maturity**: one year or less is the money market; longer is the capital market.

Outline

Direct and indirect finance

Structure of financial markets

Financial market instruments

International financial markets

Functions of financial intermediaries

Types of financial intermediaries

Regulation of the financial system

Money Market Instruments: Treasury Bills

U.S. Treasury Bills (T-bills)

- ▶ Short-term debt issued by the U.S. government
- ▶ Maturity: 1, 3, or 6 months
- ▶ Sold at a discount (buy low, redeem at face value)
- ▶ Most liquid and among the safest securities
- ▶ Major holders: banks, households, corporations, intermediaries

A \$100,000 U.S. Treasury bill issued in October 1969, due April 1970 – no coupon, sold at a discount.

Wikimedia Commons, JHerbstman, Public domain

Why Are Money Markets Attractive? (1/2)

Bank Deposits

- ▶ Reserve requirements
- ▶ Interest rates may be regulated

Money Markets

- ▶ Often provide higher yields
- ▶ Face fewer regulatory restrictions

Money market rates versus rates on bank deposits.

Source: Mishkin, *The Economics of Money, Banking, and Financial Markets*

Why Are Money Markets Attractive? (2/2)

T-bills

- ▶ Considered very safe
- ▶ Interest rates tend to move with inflation

The T-bill rate and the inflation rate.

Source: Mishkin, *The Economics of Money, Banking, and Financial Markets*

Money Market Instruments: Negotiable CDs

Negotiable Bank Certificates of Deposit (CDs)

- ▶ Bank-issued time deposits: pay interest and return principal at maturity
- ▶ Negotiable: can be traded in secondary markets
- ▶ High liquidity
- ▶ Similar to interest-bearing checking or savings deposits
- ▶ Market size (2019): about \$1.9 trillion outstanding
- ▶ A key funding source for commercial banks

Because a negotiable CD can be resold before maturity, the depositor is not locked in – that liquidity is what makes it a money market instrument.

Money Market Instruments: Commercial Paper

Commercial Paper

- ▶ Short-term unsecured debt by large banks and corporations
- ▶ Provides a quick and low-cost source of funding

Commercial paper rate and the T-bill rate.

Source: Mishkin, *The Economics of Money, Banking, and Financial Markets*

Money Market Instruments: Repos

Repurchase Agreements (Repos)

- ▶ Short-term collateralized loans (often overnight to two weeks)
- ▶ Collateral typically: Treasury bills or other government securities
- ▶ Economically similar to secured (collateralized) lending
- ▶ Important source of short-term funding for banks
- ▶ Major lenders: large corporations and financial institutions

Microsoft lends \$1 million by purchasing Treasury bills from a bank, which repurchases them at a slightly higher price the next week.

Capital Market Instruments

Capital Market Instruments

- ▶ Long-term debt and equity instruments (maturity > 1 year)
- ▶ Larger price fluctuations than money market instruments
- ▶ Generally riskier investments
- ▶ Examples:
 - ▶ Stocks
 - ▶ Corporate bonds
 - ▶ Government and agency securities
 - ▶ Municipal bonds
 - ▶ Mortgages and mortgage-backed securities
 - ▶ Consumer and commercial loans

Capital Market Instruments: Municipal Bonds

State and Local Government (Municipal) Bonds

- ▶ Issued by state and local governments
- ▶ Finance schools, roads, and public projects
- ▶ Interest is exempt from federal (and often state) income taxes
- ▶ Especially attractive to **high marginal tax rate** investors
- ▶ Major holders: commercial banks, wealthy individuals, insurance companies

A tax-exempt 4% municipal bond is worth more to an investor in the 37% bracket than to one in the 10% bracket – the higher your marginal rate, the more the exemption is worth.

U.S. Federal Income Tax: Marginal Rates

Marginal Rate	Single Filers	Married Filing Jointly
10%	\$0 – \$11,000	\$0 – \$22,000
12%	\$11,001 – \$44,725	\$22,001 – \$89,450
22%	\$44,726 – \$95,375	\$89,451 – \$190,750
24%	\$95,376 – \$182,100	\$190,751 – \$364,200
32%	\$182,101 – \$231,250	\$364,201 – \$462,500
35%	\$231,251 – \$578,125	\$462,501 – \$693,750
37%	Over \$578,125	Over \$693,750

- ▶ Higher income is subject to higher marginal tax rates
- ▶ High-income individuals have stronger incentives to engage in tax planning

Capital Market Instruments: Mortgages and MBS

Mortgages

- ▶ Loans for land, housing, or structures, backed by collateral
- ▶ Residential mortgages dominate the market

Mortgage-Backed Securities (MBS)

- ▶ Bond-like securities backed by pools of mortgages
- ▶ Played an important role in the 2007–2009 financial crisis

Key Federal Agencies

- ▶ Fannie Mae, Freddie Mac, Ginnie Mae
- ▶ Support mortgage markets by purchasing mortgages and issuing securities

Capital Market Instruments: Government and Agency Securities

U.S. Government Securities

- ▶ Issued by the U.S. Treasury to finance federal deficits
- ▶ Most liquid capital market securities
- ▶ Major holders: Federal Reserve, banks, households, foreign investors

Agency Securities

- ▶ Issued by government-sponsored or federal agencies
- ▶ Used to support mortgages, farm loans, and infrastructure projects
- ▶ Often (explicitly or implicitly) guaranteed by the federal government

Outline

Direct and indirect finance

Structure of financial markets

Financial market instruments

International financial markets

Functions of financial intermediaries

Types of financial intermediaries

Regulation of the financial system

International Bond Market

Foreign Bonds

- ▶ Issued by country A in country B
- ▶ Denominated in country B's currency
- ▶ Example: German firm issues a U.S. dollar bond in the United States

Eurobonds

- ▶ Issued by country A in country B
- ▶ Denominated in country C's currency
- ▶ Example: U.S. dollar bond issued in London

The test is the **currency**: a foreign bond is in the currency of the country where it is sold; a Eurobond is in some other currency.

Eurocurrencies and Eurodollars

Eurocurrencies

- ▶ Foreign currencies deposited outside their home countries
- ▶ Example: euros deposited in a U.S. bank

Eurodollars

- ▶ U.S. dollars deposited outside the United States
- ▶ Important source of short-term funds for banks

Clarification

- ▶ “Euro” does **not** refer to the euro currency
- ▶ Many Eurobonds are denominated in U.S. dollars

Outline

Direct and indirect finance

Structure of financial markets

Financial market instruments

International financial markets

Functions of financial intermediaries

Types of financial intermediaries

Regulation of the financial system

Functions of Financial Intermediaries

Lower Transaction Costs

- ▶ Economies of scale
- ▶ Liquidity services

Reduce Risk

- ▶ Risk sharing (asset transformation)
- ▶ Diversification

Address Asymmetric Information

- ▶ Adverse selection (before the transaction)
- ▶ Moral hazard (after the transaction)

Asymmetric Information Problems

Adverse Selection (Before the Transaction)

- ▶ Risky borrowers are more likely to seek loans
- ▶ Example: risky vs. safe borrower
- ▶ Lenders may avoid lending without good information

Moral Hazard (After the Transaction)

- ▶ Borrowers may take hidden actions that increase risk
- ▶ Example: using loan for unintended purposes
- ▶ Lenders may suffer higher losses

How Intermediaries Help

- ▶ Screening → reduces adverse selection
- ▶ Monitoring → reduces moral hazard

Outline

Direct and indirect finance

Structure of financial markets

Financial market instruments

International financial markets

Functions of financial intermediaries

Types of financial intermediaries

Regulation of the financial system

Depository Institutions

Commercial Banks

- ▶ Liabilities: checkable, savings, and time deposits
- ▶ Assets: commercial, consumer, and mortgage loans; government and municipal bonds

Savings Institutions (S&Ls, Mutual Savings Banks)

- ▶ Funded by savings, time, and checkable deposits
- ▶ Originally focused on residential mortgages; now more diversified

Credit Unions

- ▶ Small cooperative institutions serving specific groups
- ▶ Primary assets: consumer loans

Contractual Savings Institutions

Life Insurance Companies

- ▶ Funded by insurance premiums
- ▶ Invest mainly in corporate bonds and mortgages
- ▶ Limited holdings of stocks

Fire and Casualty Insurance Companies

- ▶ Funded by insurance premiums
- ▶ Invest heavily in liquid assets (e.g., municipal bonds)

Pension and Government Retirement Funds

- ▶ Funded by employer and employee contributions
- ▶ Invest mainly in corporate bonds and stocks

Investment Intermediaries

Finance Companies

- ▶ Funded by issuing commercial paper, stocks, and bonds
- ▶ Lend to consumers and businesses

Mutual Funds

- ▶ Pool funds to buy diversified portfolios of stocks and bonds
- ▶ Lower transaction costs and provide diversification

Money Market Mutual Funds

- ▶ Invest in money market instruments
- ▶ Offer check-writing features similar to deposit accounts

Hedge Funds

- ▶ Limited partnerships with high minimum investments
- ▶ Use diverse or specialized investment strategies

Regulation of the financial system

Why Regulate the Financial System?

Increase Information for Investors

- ▶ Reduce adverse selection and moral hazard
- ▶ Improve market efficiency

Ensure Soundness of Financial Intermediaries

- ▶ Prevent financial panics
- ▶ Protect economic stability

Both goals trace back to **asymmetric information**: investors cannot easily tell good securities (or sound institutions) from bad ones, so regulation forces disclosure and limits risk-taking.

SEC and Investor Protection

Key Laws and Institutions

- ▶ Securities Act of 1933
- ▶ Securities and Exchange Commission (SEC), 1934

Disclosure Requirements

- ▶ Sales, assets, and earnings
- ▶ Restrictions on insider trading

Impact

- ▶ Greater transparency
- ▶ Higher investor confidence

Ensuring Soundness of Financial Intermediaries

Restrictions on Entry

- ▶ Charters required
- ▶ Minimum capital and credibility standards

Prudential Regulation

- ▶ Disclosure and reporting
- ▶ Restrictions on assets and activities

Safety Nets

- ▶ Deposit insurance (FDIC up to \$250,000)

Other Regulations

- ▶ Limits on competition (historically)
- ▶ Restrictions on interest rates (e.g., Regulation Q)

Financial Regulation Abroad

Similarities Across Countries

- ▶ Licensing and supervision
- ▶ Disclosure requirements
- ▶ Prohibition of insider trading

Key Differences

- ▶ Branching restrictions: the U.S. historically restricted bank branches (abolished in 1994)
- ▶ Asset holdings: U.S. banks face stricter limits on holding commercial shares than banks in Japan and Germany

Chapter Summary

- ▶ Funds flow from savers to borrowers directly through financial markets or indirectly through intermediaries
- ▶ Markets are classified by claim (debt vs. equity), by issue (primary vs. secondary), and by maturity (money vs. capital market)
- ▶ Money market instruments (T-bills, CDs, commercial paper, repos) are short-term, liquid, and safe; capital market instruments (stocks, bonds, mortgages) are long-term and riskier
- ▶ Intermediaries lower transaction costs, share risk, and reduce adverse selection and moral hazard through screening and monitoring
- ▶ Regulation increases information for investors and ensures the soundness of intermediaries
