WORKING PAPERS

Trade Restrictiveness Indices with Discriminatory Tariffs with James Lake [**Job Market Paper**] — application: US–China tariff war, 2018–2024. *Presented at the Midwest Economic Theory and International Trade Meetings, Virginia Tech, 2025.*

Abstract: Trade-restrictiveness indices summarize a country’s tariff schedule as a single welfare-equivalent uniform tariff, but the existing indices assume most-favored-nation tariffs. Since 2018 the largest tariff changes—the US–China tariff war, retaliatory tariffs, and proliferating preferential agreements—have been discriminatory by design. We extend the trade-restrictiveness index to partner-specific tariffs while preserving its welfare interpretation and derive a closed-form decomposition into a “level” component (how much a country restricts trade) and a “discrimination” component (how unevenly it does so). Computing the indices from WITS/Comtrade data for 2017–2024, we find that the MFN-only index systematically understates trade distortions when discrimination is high,

and the decomposition separates, for the first time in this framework, the welfare cost of discrimination from the cost of protection.
